

## Washington State Part C System Improvement Project

### June 2010 Update

System Improvement Project work in June focused on reviewing feedback and suggestions from participants at the April's stakeholder meeting. Please see the summaries of participant input on three of the main activities from the stakeholder meeting:

- [Integrating outcomes into the IFSP process table activity;](#)
- [State structures for Part C Service provision post-presentation discussion;](#)
- and, [brainstorming system changes needed to support effective practice.](#)

Most ideas and concerns at the meeting fell into one of seven areas summarized in our [stakeholder document on emerging themes](#).

A draft mission and principles document is in the field for comment and will be finalized in August by ESIT staff members and volunteers from the stakeholder meeting. This document will help better define the early invention system's goals and values.

Additionally, a great deal of work has gone into the development of a new Individualized Family Service Plan (IFSP) process document. This document will assist providers in obtaining more functional information for a better IFSP. The document will be field-tested in late August by a few volunteers, and a revised version will be available for the entire community to provide further feedback.
